技术规格

Background:	The protein encoded by this gene localizes to the inner mitochondrial membrane and catalyzes the conversion of glycerol-3-phosphate to dihydroxyacetone phosphate, using FAD as a cofactor. Along with GDP1, the encoded protein constitutes the glycerol phosphate shuttle, which reoxidizes NADH formed during glycolysis. Two transcript variants encoding the same protein have been found for this gene.
Applications:	ELISA, IHC
Name of antibody:	GPD2
Immunogen:	Synthetic peptide of human GPD2
Full name:	glycerol-3-phosphate dehydrogenase 2

SwissProt:	P43304
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human tonsil
IHC Recommend dilution:	30-150
